**Publication Ethics and Malpractice Statement**

The Begell House Publication Ethics and Malpractice Statement is based on the guidelines developed by the Committee on Publications Ethics (COPE).

It is the intent of Begell House to publish original research articles of the highest quality using fair and ethical procedures in screening and peer-reviewing submitted manuscripts.

---

**Ethical Guidelines for Authors**

**Reporting Standards**

Authors of reports of original research should present an accurate account of the work performed as well as an objective discussion of its significance. Underlying data should be represented accurately in the paper. A paper should contain sufficient detail and references to permit others to replicate the work. Fraudulent or knowingly inaccurate statements constitute unethical behavior and are unacceptable.

**Data Access and Retention**

Authors are asked to provide the raw data in connection with a paper for editorial review, and should be prepared to provide public access to such data (consistent with the ALPSP-STM Statement on Data and Databases), if practicable, and should in any event be prepared to retain such data for a reasonable time after publication.

**Originality and Plagiarism**

The authors should ensure that they have written entirely original works, and if the authors have used the work and/or words of others that this has been appropriately cited or quoted. Begell House uses plagiarism detection software to help ensure authors’ contributions are original. Editors will review plagiarism reports and may request additional revisions based on the results. In excessive cases, editors may reject manuscripts solely on the basis of the results.

**Multiple, Redundant or Concurrent Publication**

An author should not in general publish manuscripts describing essentially the same research in more than one journal or primary publication. Submitting the same manuscript to more than one journal concurrently constitutes unethical publishing behavior. Authors are required to affirm that their manuscript has not been concurrently submitted elsewhere during the initial submission process.

An author who is discovered to have concurrently submitted a manuscript to more than one publication will be made aware of the duplicate submission and will automatically have their manuscript rejected. The editor(s) of all other affected publications will also be notified. After review, additional steps may be taken, including preventing the author from submitting future manuscripts to Begell House and notifying the author’s institution of the concurrent submissions.

**Acknowledgment of Sources**

Proper acknowledgment of the work of others must always be given. Authors should cite publications that have been influential in determining the nature of the reported work.

**Intellectual Property**
Authors should acknowledge the source(s) of any figures, photos or tables included in their manuscript that have been previously published or are not the authors’ original works. Begell House requires authors to assert the originality of their manuscripts, including figures and tables, and to acquire explicit permission from the copyright holder of any reproduced material.

**AUTHORSHIP OF THE PAPER**

Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors. The corresponding author should ensure that all appropriate co-authors and no inappropriate co-authors are included on the paper, and that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication. The corresponding author is required to affirm that all authors have contributed to, read, and approved the submission of the manuscript in its current form at the time of submission.

**DISCLOSURE AND CONFLICTS OF INTEREST**

All authors should disclose in their manuscript any financial or other substantive conflict of interest that might be construed to influence the results or interpretation of their manuscript. All sources of financial support for the project should be disclosed, as well as any other potential conflicts.

**HAZARDS AND HUMAN OR ANIMAL SUBJECTS**

If the work involves chemicals, procedures or equipment that have any unusual hazards inherent in their use, the authors must clearly identify these in the manuscript. If the work involves the use of animals or human participants, the authors should ensure that all procedures were performed in compliance with relevant laws and institutional guidelines and that the appropriate institutional committee(s) has approved them; the manuscript should contain a statement to this effect. Authors should also include a statement in the manuscript that informed consent was obtained for experimentation with human participants. The privacy rights of human participants must always be observed.

**FUNDAMENTAL ERRORS IN PUBLISHED WORKS**

When an author discovers a significant error or inaccuracy in his/her own published work, it is the author’s obligation to promptly notify the journal editor or publisher and cooperate with the editor to retract or correct the paper. Journals will publish retraction notices and errata in cases where such corrections are deemed justified by the editors.

**COMPLAINTS AND APPEALS**

Editors make the final decision about the acceptance or rejection of any manuscript. If an author wishes to appeal such a decision, they may contact the editor of the journal directly. Complaints about coauthors, reviewers or editorial board members should be directed to the editor-in-chief.

**ETHICAL GUIDELINES FOR REVIEWERS**

**CONTRIBUTION TO EDITORIAL DECISIONS**

Peer review assists the editor in making editorial decisions and through the editorial communications with the author may also assist the author in improving the paper.

**PROMPTNESS**
Any selected referee who feels unqualified to review the research reported in a manuscript or knows that its prompt review will be impossible should notify the editor and excuse himself from the review process.

CONFIDENTIALITY
Any manuscripts received for review must be treated as confidential documents. They must not be shown to or discussed with others except as authorized by the editor.

STANDARDS OF OBJECTIVITY
Reviews should be conducted objectively. Personal criticism of the author is inappropriate. Referees should express their views clearly with supporting arguments.

ACKNOWLEDGEMENT OF SOURCES
Reviewers should identify relevant published work that has not been cited by the authors. Any statement that an observation, derivation, or argument had been previously reported should be accompanied by the relevant citation. A reviewer should also call to the editor's attention any substantial similarity or overlap between the manuscript under consideration and any other published paper of which they have personal knowledge.

DISCLOSURE AND CONFLICT OF INTEREST
Privileged information or ideas obtained through peer review must be kept confidential and not used for personal advantage. Reviewers should not consider manuscripts in which they have conflicts of interest resulting from competitive, collaborative, or other relationships or connections with any of the authors, companies, or institutions connected to the papers.

Begell House strongly advises reviewers to adhere to COPE Ethical Guidelines for Peer Reviewers.

ETHICAL GUIDELINES FOR EDITOR

PUBLICATION DECISIONS
The editor of the journal is responsible for deciding which of the articles submitted to the journal should be published. The editor may be guided by the policies of the journal's editorial board and constrained by such legal requirements as shall then be in force regarding libel, copyright infringement and plagiarism. The editor may confer with other editors or reviewers in making this decision.

FAIR PLAY
An editor will at any time evaluate manuscripts for intellectual content without regard to race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the authors.

CONFIDENTIALITY
The editor and any editorial staff must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, potential reviewers, other editorial advisors, and the publisher, as appropriate.

DISCLOSURE AND CONFLICTS OF INTEREST
Unpublished materials disclosed in a submitted manuscript must not be used in an editor's own research without the express written consent of the author.

Begell House refers editors to the COPE Code of Conduct and Best Practice Guidelines for Journal Editors.
**PUBLISHER’S CONFIRMATION**

In cases of alleged or proven scientific misconduct, fraudulent publication or plagiarism, the publisher, in close collaboration with the editors-in-chief, will take all appropriate measures to clarify the situation and to amend the article in question. This includes the prompt publication of an erratum or, in the most severe cases, the complete retraction of the affected work.

The publisher and the journal do not discriminate on the basis of age, color, religion, creed, disability, marital status, veteran status, national origin, race, gender, genetic predisposition or carrier status, or sexual orientation in its publishing programs, services and activities.

**HUMAN AND ANIMAL RIGHTS STATEMENT**

Begell House Publishers encourages authors submitting manuscripts covering experiments on human subjects to indicate that the process followed was in accordance with the ethics committee from the institution where the work was undertaken and the [Code of Ethics of the World Medical Association](https://www.worldmedicalethics.net/). If doubt exists whether the research was conducted in accordance with the ethical standards, of both of these committees, the authors must describe the reason for their method, and show that the institutional review group clearly approved the unsure parts of the study. When manuscripts include experiments on animals, authors should indicate if they followed the institutional and national guide for the care and use of laboratory animals. For additional information see [Animal Welfare Act and Regulations "Blue Book" (September 2013)](https://www.hhs.gov/ohs/animalcare/index.html). Begell House retains the right to reject any manuscript on the basis of unethical conduct of either human or animal studies. All photographs of human subjects must be cropped sufficiently to prevent the subjects from being recognized. No photographs of human subjects will be published without a signed copyright form from the subject. Patient anonymity should always be preserved.
